

Education

Columbia University, Columbia College, New York, NY, Expected May 2026

Joint Political Science & Statistics Major: GPA 4.04

Selected Coursework: Senior Honors Seminar; Quantitative Political Research I & II; Applied Linear Regression; Applied Bayesian Methods; Applied Machine Learning.

Honors: Phi Beta Kappa, Charles A. Beard Prize (best paper in political science, 2026), Saltzman Institute of War and Peace Student Scholar, Departmental Honors, Dean's List (all semesters).

Work Experience

NBC News

Editorial and Production Intern, September 2024–April 2025

At *Top Story with Tom Llamas*, I wrote anchor tells, sourced video content from wire services and social media, and edited short news segments. I met tight deadlines while exercising sound judgment and sensitivity in determining what content was appropriate for broadcast.

Columbia Daily Spectator

Video Journalist, September 2022–December 2024

I led a team of 12 student journalists through the process of researching, writing, and producing videos for the Spectator's social platforms. During my time on staff, I covered the protests at Columbia, including the encampment, occupation of Hamilton Hall, and the related arrests. Videos I produced, wrote, and edited have been viewed over 1.5 million times across Instagram, YouTube, and TikTok, and my reporting has been cited in national media outlets, including *The New York Times*.

PEN America

Free Expression Leadership Fellow, May 2024–August 2024

Working with PEN's Digital Safety team, I researched, copy edited, and fact checked a report on how natural language processing can be leveraged to better protect journalists and writers from identity-based hate, harassment, and intimidation online. I assisted the team as they offered anti-harassment training to professional newsrooms and advocated for social media companies to adopt policies that better protect journalists from threats of violence.

William Pitt Sotheby's International Realty

Data Analysis Intern, May 2023–August 2023

Using data that I retrieved from the Multiple Listings Service, public tax records, and web scraping, I created databases for real estate agents that bolstered their ability to advertise properties, evaluate local markets, and understand how well they retained clients. I used R and Python to automate processes that were previously done manually, helping to get agents and office managers out from behind their computer screens and back to working with clients.

Research

Senior Thesis, September 2025–April 2026

I conducted a survey experiment using Qualtrics and Prolific to test how identity-based arguments and knowledge of India's no first use policy alter support for a hypothetical first strike

nuclear attack. The project entailed writing survey instruments, constructing composite indices using inverse covariance weighting and principal component analysis, and running regression and interaction-effects models to analyze treatment heterogeneity. My thesis was named the best paper in Columbia's political science department for the 2025-26 academic year. You can find the final project [here](#).

Skills

Programming: R, Python, SAS, Excel, LaTeX, HTML

Other: Qualtrics, Amazon MTurk, Prolific

Languages: [Native] English; [Limited working proficiency] French
